Connect and manage mobile teams on a single device with AT&T Enhanced Push-to-Talk (AT&T EPTT)

AT&T is America's Most Reliable Wireless Network[1]

Keep projects moving forward remotely with group and one-to-one voice, messaging, location tracking, and more

For teams working out in the field and on the go, simple and reliable communication enhances both projects and safety. With AT&T Enhanced Push-to-Talk, staying in touch with mobile teams and supervisors is never more than a button push away. Our Internet Protocol (IP)-based platform works like a walkie-talkie, connecting you faster than cellular calling using a wide range of mobile devices. Pressing a single button connects you to as many as 250 talkgroup members per channel on up to 96 channels using our Standard service, and up to 3,000 members with our Enhanced service, based on network capacity. Group communication saves you time,

making everyday operations more effective and efficient.

AT&T EPTT uses voice, messaging, and authorized location tracking to enhance productivity and visibility between you and your coworkers, whether you're across the way or across the country. Our reliable, nationwide AT&T wireless broadband network brings next generation technology and connectivity to the places businesses need it most with fast speeds that let AT&T EPTT users share locations, multimedia files, and messages more securely than traditional over-the-top push-to-talk applications.

Features

- Highly secure voice, messaging and data sharing with the push of a button
- Authorized location tracking and sharing
- Corporate Administration Tool to manage users, talkgroups, and features
- Optional Web Dispatch Solution to monitor and manage teams

Benefits

- Near-real-time collaboration
- Land Mobile Radio (LMR) interoperability
- Works with a large selection of iOS, Android, and push-to-talk-centric devices
- Reliable nationwide coverage on our AT&T wireless network plus in-building Wi-Fi

[1] AT&T awarded Most Reliable Network by GWS OneScore 2022. GWS conducts paid drive tests for AT&T and uses the data in its analysis.

Near-real-time collaboration

Sometimes you need more information than a one-on-one conversation will give you. With AT&T EPTT, you'll get a complete view with features like encrypted group calling plus the ability to send texts, images, videos, and files to contacts and talkgroups in near-real time.

Cost-effective spending

Our AT&T EPTT application is compatible with a large range of smartphones and tablets, as well as rugged, specialty, and push-to-talk-centric devices. Cross-compatibility gives workers the freedom to choose devices that serve them best.

We offer two service options, Standard and Advanced. AT&T EPTT Advanced includes user safety features such as emergency calling, user check, and discreet listening. You can also choose an AT&T EPTT-only option that doesn't include cellular calling or data browsing on select devices. The service is billed as a monthly subscription, enabling you to budget more accurately. All charges are included on a single bill for simplicity. This makes AT&T EPTT an attractive, cost-effective solution for quick and easy device-to-device and group communication.

Simple, straightforward management

A web-based Corporate Administration Tool (CAT) lets you configure groups and users, manage features, and push updates from your browser to your workforce with a single click.

Our optional Web Dispatch Solution (WDS) supports daily operations with a map-centric view of your teams, enabling you to improve agency efficiency by deploying the most appropriate resources for each situation. Track team members, set geo fences, and create location and role-based talkgroups for simple and reliable communication that takes productivity above and beyond.

Extend coverage with LMR interoperability plus Wi-Fi

For public safety agencies and utilities, staying connected is essential to maintaining public and user safety. AT&T EPTT extends the reach of bounded LMR coverage areas and expands capabilities, bringing efficient, nationwide coverage to your agency plus backup in the event of an LMR outage. Wi-Fi connectivity keeps users in touch in hard-to-reach places like building basements. You'll also benefit from features like location services, data and video sharing not available on narrowband systems.

The AT&T overall wireless voice and data network covers more than 99% of all Americans.[2]

Service and support to see you through

Choosing AT&T Business means choosing dedicated, end-to-end customer and sales support backed by the dependability and reliability you'd expect from business connectivity experts. Our solutions help you stay connected, communicate and collaborate efficiently, and protect and manage data with security that starts at the network.

Connect quickly and securely with AT&T Enhanced Push-to-Talk.
